

Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-1393
Project Name	EduGenie – AI Learning Assistant
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how EduGenie can be extended to support a larger user base, higher request volumes, additional data, stronger security controls and new educational features.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	Dependence on an external Gemini API for AI-generated r	sponses.Response availability and latency can depend on the exte	nal AI service.High
2	Current implementation does not require a persistent appli	ation database.Long-term learner progress and history are not stored as	core feature.Medium
3	Higher concurrent usage can increase backend and AI-ser	vice load.Response time may increase as concurrent requests grow.	High

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Single deployed web application with FastAPI	Introduce a managed database for user profiles, learning history, quiz results and progress.
2	Data Storage	Persistent database is not required by the current	caching where appropriate, asynchronous/background processing and monitoring to
3	Performance	AI requests are processed through the backend and external Gemini service.	secure secret management, authentication, authorization, rate limiting, HTTPS and
4	Security	API credentials are intended to be supplied through configuration.environment	secure secret management, authentication, authorization, rate limiting, HTTPS and

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Improve UI, error handling, API monitoring and deployment reliability	0–3 months	Better usability and operational stability.
Phase 2	User accounts, database-backed learning history and progress tracking	3–6 months	Personalized learning history and progress
Phase 3	Multilingual support, voice interaction and richer image/PDF learning inputs	6–12 months	Broader accessibility and more learning for
Phase 4	Mobile application, dashboards, gamification and learning-platform integration	12+ months	Expanded learning ecosystem and engagement capabilities

Future Roadmap – Continued

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	User accounts, database-backed learning history and progress tracking	3–6 months	Personalized learning history and progress
Phase 3	Multilingual support, voice interaction and richer image/PDF learning inputs	6–12 months	Broader accessibility and more learning for
Phase 4	Mobile application, dashboards, gamification and learning-platform integration	12+ months	Expanded learning ecosystem and engagement capabilities

Scalability Strategy Summary

The roadmap prioritizes improving reliability and monitoring first, then adding persistent learning data and personalization, followed by broader input methods and mobile/learning-platform integration. These are proposed future enhancements rather than features claimed as currently implemented.
